## Senior Project Manager Medical Devices (m/f/d)

### Description

Your responsibilities will include restructuring organizational processes, planning development projects, organizing project management, establishing pragmatic methods for project controlling and supporting all phases of product development with a high level of methodological expertise. Working as a consultant or project manager, you will bring our customers' highly diverse projects to a successful conclusion and, if necessary, also lead customer teams.

### Qualifications

Would you like to take the practical experience and know-how you have acquired as a development manager or project manager in the medical technology branch and apply it in a targeted and efficient manner? Are you a team player with strong leadership skills who is constantly looking for new challenges instead of routine? Are you skilled in developing and implementing pragmatic alternative solutions? Is communication one of your strengths – also in English? We look forward to learning more about you!

### Employment benefits

In both positions, you can look forward to working with a highly motivated, open team and to the advantages offered by a young, fast-growing company, where decision-making is approached efficiently and flexibly. Good earning opportunities and independence from rigid hierarchical structures await you!

### Contact
